DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 11,

The claim has been interpreted in light of the specification, however it is not within the claim language, what applicant has intended claim by the recited limitation of "coupling non-integral harmonic mode locking", thereby the claim is considered vague and indefinite, as such a proper search of the limitation has been conducted.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Szarmes (US 5,590,148).

Regarding claims 1, 4 and 11,

Column 9 lines 39-43, discloses harmonically locked and phase locked resonator [applicant's resonator]. Column 15 lines 11-20, discloses the use of an uncoated birefringent beamsplitter having a P-polarized surface [applicant's first surface] and an S-polarized reflection surface [applicant's second surface].

Regarding claims 2 and 6,

Column 9 line 25, discloses the beamsplitter in a Michelson resonator [applicant's interferometer].

Regarding claims 3 and 5,

Column 2 lines 26-31, discloses low losses and even zero losses at the P-polarization surface [applicant's low-loss].

Regarding claims 7-10,

Column 7 line 46 to column 8 line 50, discloses equations for obtaining tuning and selecting the hypermode with minimum losses. It is an inherent characteristic for the interferometer to have a free spectral range with any integral.

Regarding claim 12,

Column 15 discloses the uncoated birefringent beamsplitter used in interferometer with high power lasers, which among the high power lasers is the free electron laser (FEL), as disclosed in column 1 lines 42-45.
